
Kurdistan Species Checklist 2025

Species Checklist

Climate.KRD - 2025

Purpose and Scope

This checklist brings together species documented across the Kurdistan Region into a single reference list, intended to support researchers, students, and conservation practitioners working across the region's varied habitats.

It is organized to complement the searchable Species listing on the Climate.KRD website rather than replace it, offering a compact printable reference alongside the full online records.

Compilation Methodology

Entries are drawn from a combination of field survey records, camera-trap data, verified community photo submissions, and existing published reference material on the region's biodiversity.

Each entry is reviewed before inclusion, and records lacking sufficient supporting detail are held back from the checklist until they can be confirmed.

How to Use This Checklist

Species are grouped by broad category to make it easier to cross-reference against field observations. For full descriptions, distribution notes, and photographs, refer to the corresponding entry on the Species page of the Climate.KRD website.

Notes on This Edition

This edition is a sample document generated for demonstration purposes as part of the Publications feature, and does not represent a final or complete checklist.
